To Whom It May Concern:

I am writing about the Branick Nitrogen Generator, Model 675, we purchased about a year ago. The machine has been working excellent and I would recommend it to anyone that is looking to get into the nitrogen business. We normally have the machine in one spot and bring the vehicles to it, but the portability of the machine makes it very easy to move about the various parts of the shop as needed. I looked into other machines before purchasing from Branick, but having dealt with this company in the past it was the service after the sale that really made the sale. And it's easy to use. With just a few minutes of training, just about anyone in the service department can perform a nitrogen fill, which helps keep the costs down and the profits up, causing a quick return on your investment.

We have serviced hundreds of vehicles since purchasing the machine and customer response has been very positive. Some customers have even said they think their vehicle rides better. We offer free nitrogen with any new tire purchase and we will gladly top off as needed at no charge. Sometimes we'll install nitrogen at no charge without any purchase just to get customers to try it. We mostly install it in cars and light trucks but we have had a few RV customers request it as well.

Overall I think the nitrogen market will continue to grow as more and more customers become aware of it and understand the benefits nitrogen can offer. As the automotive market continues to change, and the fact that TPMS is now standard on many vehicle lines, I wouldn't doubt if vehicles start coming from the factories with nitrogen inflation already done.
