Phil Giallambardo
Branick Equipment
1424 Healing Springs Drive
Denton, NC 27239

Dear Phil

Just a note to let you know how successful the Branick Nitrogen machine has been for our business. We began filling tires with nitrogen in late April, based on consumer response we will have our machine paid for in less than one year. We were fortunate to have the local newspaper run an article about the use of nitrogen as well as an expose from the local television station. The response from these two media sources brought hundreds of phone calls and anywhere from ten to fifteen new customers per day for nitrogen fill and tire rotations.

We explain to our customers the benefits of filling tires with nitrogen, the fact that their tires will maintain a more stable air pressure which results in better gas mileage and longer wearing tires. We feel that anything we can do to provide better service to our customers to help them save money is a win-win opportunity for us all. Our customers are reporting gas mileage savings from 2-4 miles per gallon. The investment in nitrogen equipment is an investment for our customers and the environment.

Sincerely,

D.D. Coley,
President
