- Pass-Thru Design

**\*Light Kit Available on Non  
Pass-Thru Models\***

## Breeze Through Tire Inspections!

The Branick Model 5600 Tire Spreader is a robust machine built to make easy work of the tire inspections. An integrated ramp allows for easy loading and unloading of tires, even super singles. A foot operated lift lets you raise and lower the cradle to a comfortable work height. Hand controls on both sides allow the operator to have more versatility when working around the machine along with three bi-directional, foot operated controls, and variable speed, inspection is a breeze. Paired with an electric motor, this makes for a quiet, smooth operating unit that's built to last. And if you're looking to speed up production and keep tires rolling down the line, then the Pass-Thru ramp is what you need. Made in the U.S.A at Branick's manufacturing facility in Fargo, ND!
